# Leading research university finds more funding with better data visualization

juicebox

You're tackling some of the world's most complex problems

Picture this. You're a top-ranked research university. Every year, you're awarded millions of dollars in grants to tackle all kinds of complex issues – from finding better ways to fight malaria to reducing energy waste through nuclear power.

But it's hard to go after funding without a clear picture of performance

Finding funding for research is not easy. In an increasingly competitive landscape, it's critical to measure performance and focus your efforts. But with your data buried under Excel filters and tables, individual departments lack the insights needed to inform their efforts.

So you put your data in Juicebox

We use Juicebox to transform your Excel spreadsheets into a custom, responsive web application that anyone can use.

Information is accessible and funding is up

Now insights are just a click away – whether it's seeing a department's success rate or finding out which agencies are providing the most money. And your institution just secured its highest level of research funding in a non-stimulus year.

"In the past, sharing grant information was a cumbersome and time-consuming process involving requests via emails or phone calls, plus time to create and email the report. Our audience was also dependent on us being in the office to provide them with the information sought. With JuiceBox, they can find the answers to their questions within seconds of opening the user-friendly display no matter what time it is. And the interactivity provides them with a modern and intuitive way to quickly analyze the data for decision making and strategic planning."

- Terri Hall, Director, Research Business Intelligence, Notre Dame Research, University of Notre Dame
